Il permet de **gérer** et **personnaliser** ses abonnements à des **flux RSS**.

Mais aussi de suivre jusqu'à **100 flux** et de les organiser en **3 dossiers**.

- Suivre des **sites internet, Twitter, Reddit et Newsletters**
- Surveillez le Web avec des flux d'**IA**
- Rechercher parmi ces **flux**
- Journal des **modifications**
- En **savoir plus** et **obtenir de l'aide**

Sur la **page d'accueil**
on retrouve un résumé des **flux suivis**.

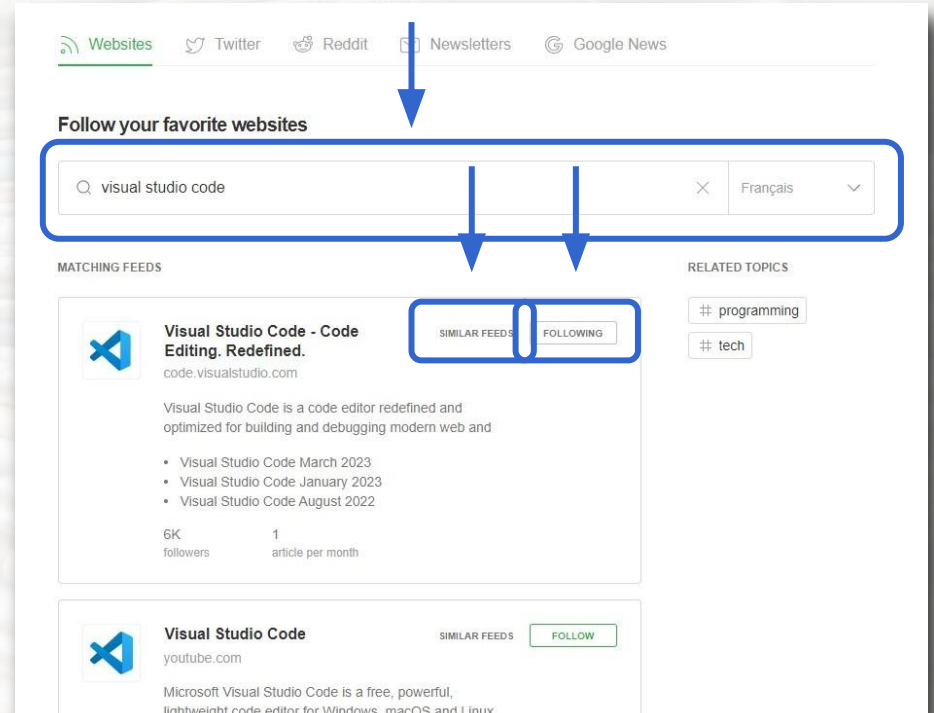

The screenshot displays the Feedly homepage. On the left is a sidebar with navigation options: Today, Read Later, Feedly AI, Integrations & API, FEEDS, All, Espace Utilisateur (highlighted), DHTMLX Blog, Sencha.com, Frameworks Libraries, and various other feeds. The main content area is titled 'Espace Utilisateur' and features a 'LATEST' section. A blue arrow points from the text above to this section. The 'LATEST' section contains a list of articles with their titles, sources, and timestamps. A blue rounded rectangle highlights the entire 'LATEST' section. At the bottom of the main content area, there is a 'MARK ALL AS READ' button and a note 'Reviewed 14 articles'.

Angular Developer Survey 2023

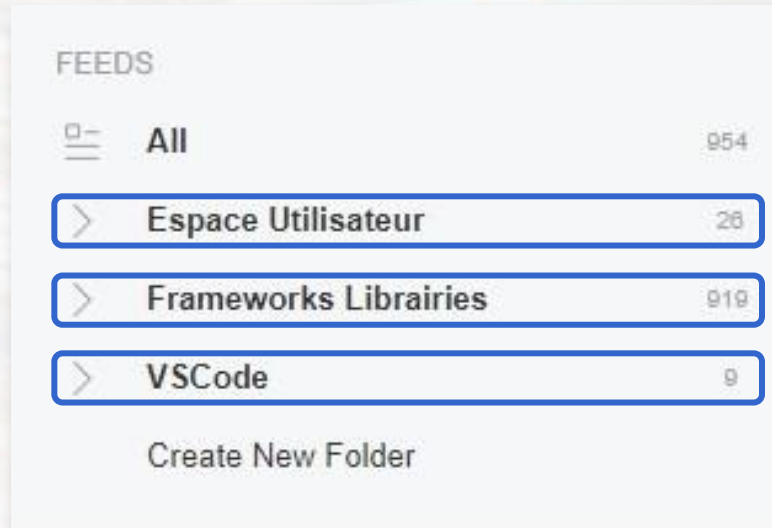

Angular Blog by Minko Gechev / Jan 4, 2024 at 1:36 AM // keep unread // hide

Over the past year we've been evolving Angular based on developer feedback and community trends. We receive developer feedback from dozens of sources including GitHub, social media, interviews, conferences, etc. One of the strongest guiding indicators which has been highly influential in our prioritization process are the results from the Angular developer survey.

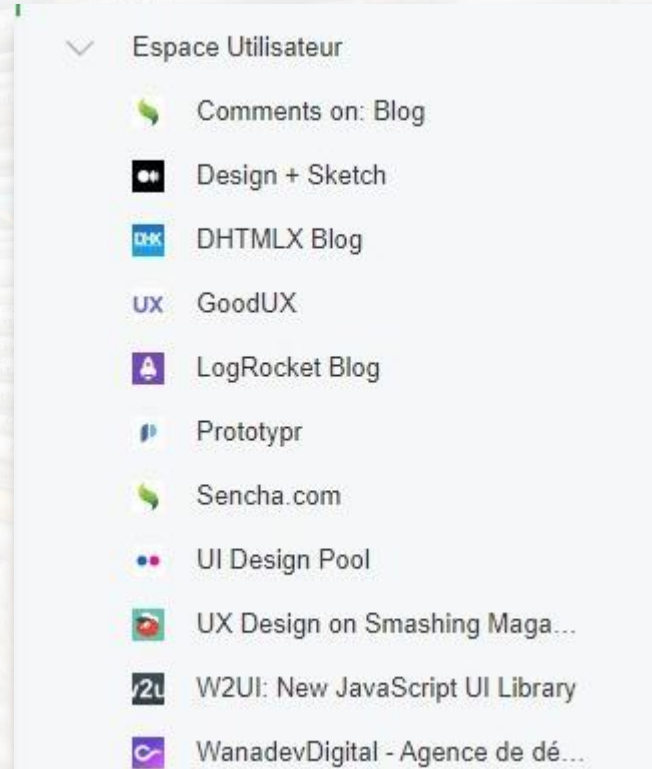

In 2023 we delivered a lot to address developers needs for higher performance and better developer experience. Just to mention a few improvements: to make Angular more enjoyable to use, we shipped a brand new build pipeline that improves build speeds with up to 87%, revamped Angular's reactivity system with Signals, and delivered deferrable views to help you make your apps faster.

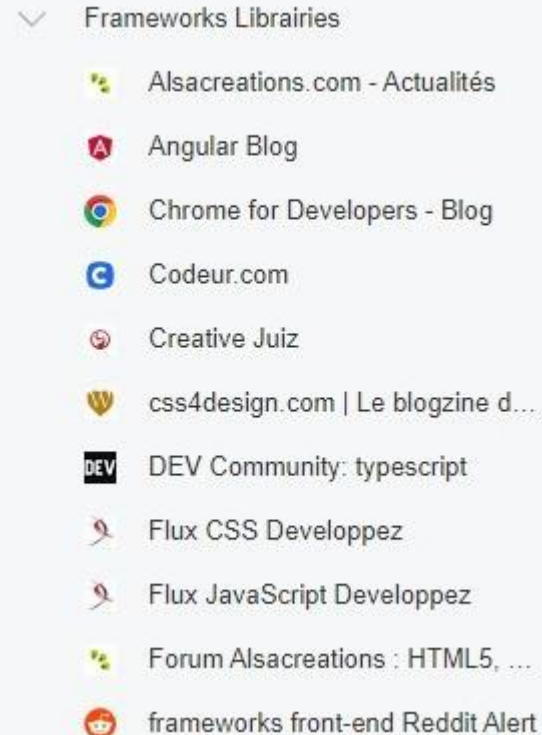

Pour ce projet,
3 thèmes ont été sélectionnés et suivis.

Pour cette partie, le choix de suivis c'est porté sur des **blogs** spécialisés autour de l'**UI** et des applications avec **React**.

La meilleure solution pour avoir
un site internet **clair, optimisé** et
qui correspond aux **normes**
d'accessibilité et d'utiliser des
librairies.

Visual Studio Code est l'outil de développement le plus **populaire** auprès des développeur en 2023.

Extensible, il est modulable et permet l'ajout de fonctionnalités qui aideront l'équipe dans leur travail.
